

## XIM3 Mouse DPI Verification Grid

Print and use this grid to ensure your mouse is configured optimally for XIM3.

The **DPI Check** tool is under 'Settings' on your **XIM3**, Each square in this grid is **1"x1"**. Align your mouse with one of the vertical edges of the grid. Activate the DPI Check tool and slowly drag your mouse horizontally to the next edge. When finished, look at the first value produced by DPI Check. It should match the DPI setting of your mouse.

Reselect DPI Check to reset, repeat for vertical movement and ensure the second value matches your mouse DPI setting. If the reported value doesn't match your mouse DPI, please verify your mouse hardware is configured correctly.
